Windows Phone Application

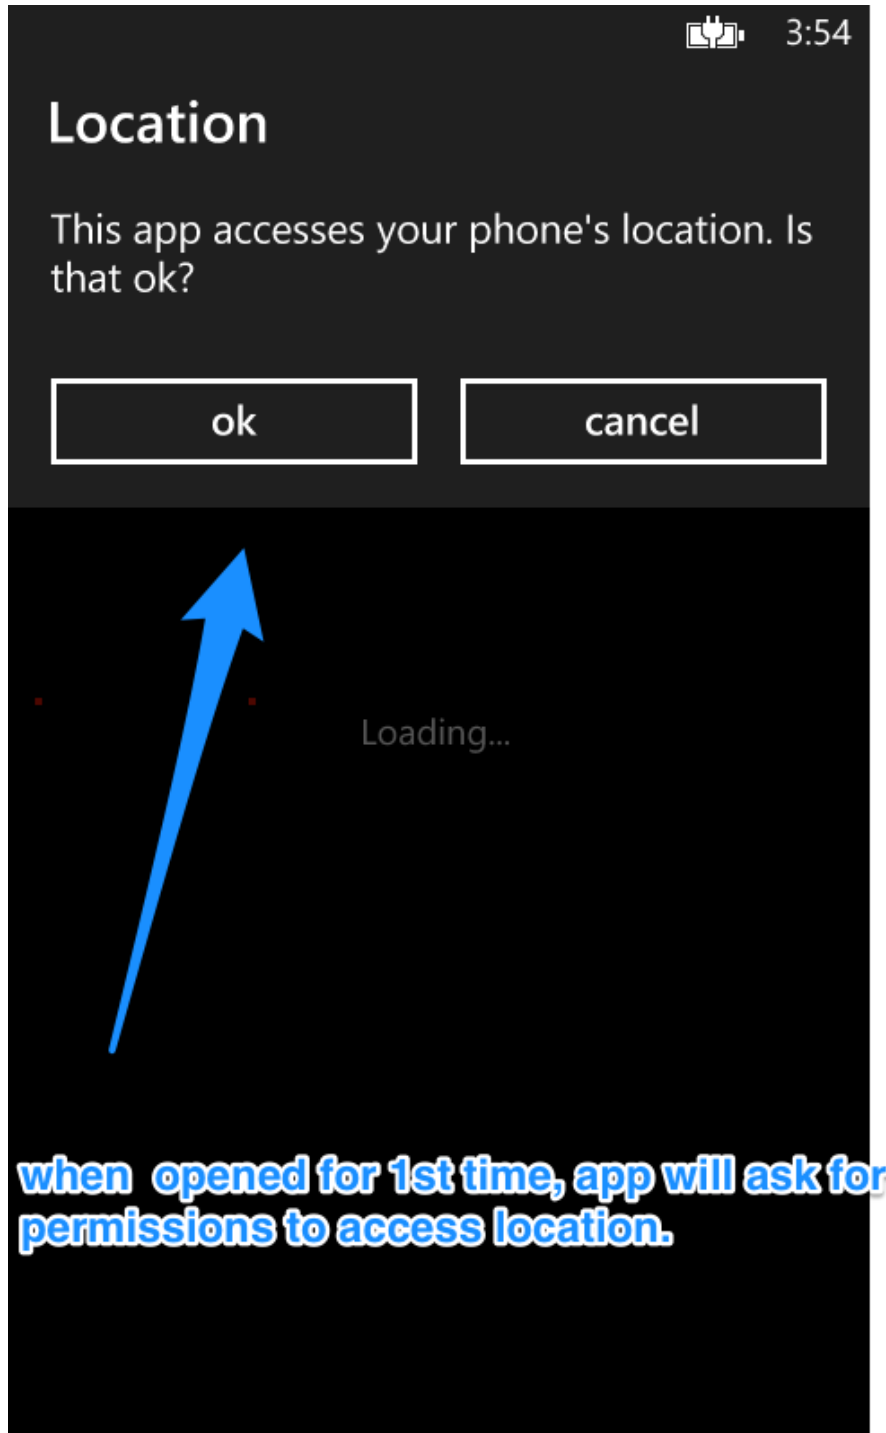

Weather App for Windows

Read Me Document:

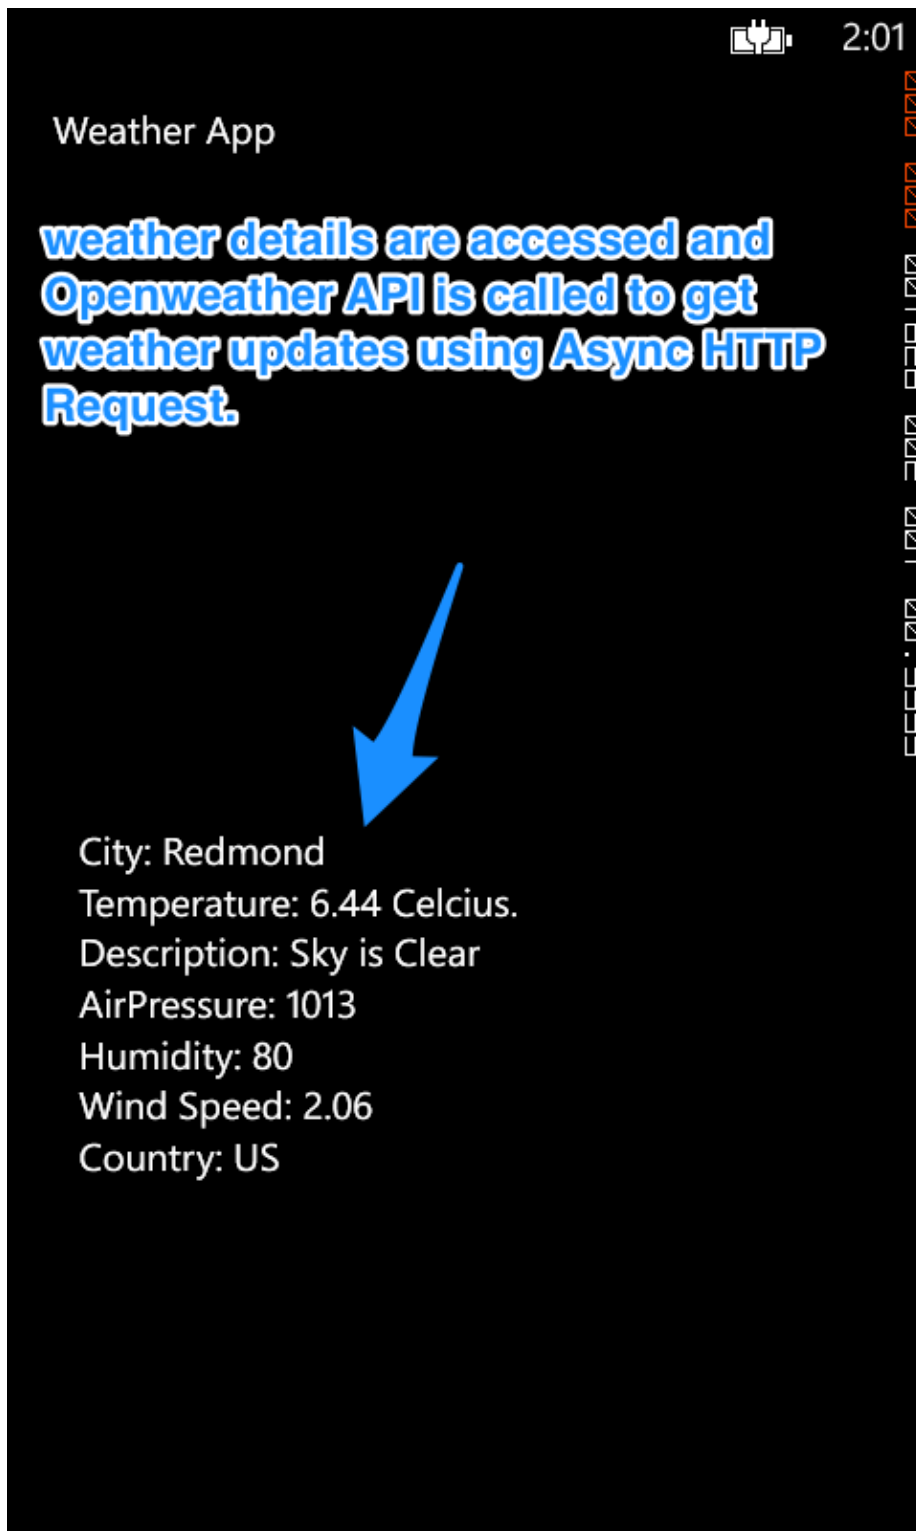

- Weather App for Windows Phone

- Weather Application access current location of windows Phone. When opened for the first time it will ask user's permission to access current phone's location. If approved by user current permission granted will be stored in local Isolation Storage.

- Location of current phone is used in a HTTP Async Request to OpenWeather API and results are parsed and displayed on screen

- App also support Windows Tile on Main Screen and Weather is updated automatically.
